Gentlemen:

The enclosed, updated, report for Market Sample 32 replaces the draft mailed April 27, 1990. During the draft's 30 day review period, Philip Morris requested that Alpine KFMSP, Alpine 100s 100FMSP, Benson & Hedges Multifilter KFSP, and Philip Morris RNFSP be retested. The new values for these brands are the ones now listed in the report.

In the draft report, the sorted "tar" values were truncated and the top six brands omitted. These have been added to this report.

Updated files containing TITL results on a 360K DSDD disk, readable on any IBM compatible machine, are also included. Two files are in Lotus .wk1 format. One contains TPM, Water, and Puff Counts in addition to Tar, Nicotine, and CO; the other contains the rounded Tar, Nicotine, and CO values. These should be readable by most programs; however, the same information is also provided in ASCII files (with a .csv extension) with commas delimiting the data fields.

Yours truly,

William L. Steele
